# CURVED EDGE VC FOAM

## FEATURES AND BENEFITS

- ◆ **Improved Operator Control** - patented VC design features a concave pad surface that varies the level of pad-to-surface contact depending on the pressure applied by the operator. Allows the operator to "work" compounds and polishes.
- ◆ **Eliminates Splatter and Waste** - The concave surface forms a "polish pocket" which encapsulates compounds and polishes during the buffing process. Especially effective on vertical surfaces.
- ◆ **Ideal for Tight Spaces** - Curved edge profile is great for buffing around objects in tight spaces
- ◆ **Recessed Back** - Prevents contact between the backing plate and working surface.
- ◆ **Specialty Foams** - High strength foams are specially formulated for buffing, polishing and finishing applications.
