CCS Technology™

from Lake Country Mfg., Inc.

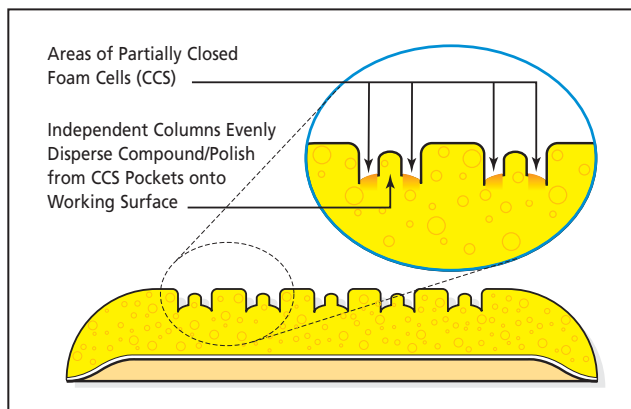

Background: Conventional foam pads absorb polish too quickly. This reduces polish and pad performance because most of the polish is trapped below the working surface of the pad. CCS Technology™ solves this common problem using strategic patterns of partially closed foam cells.

- CCS - Slows rate of polish absorption ...** enhances polish performance
- CCS - Improves operator control ...** CCS pockets gradually release polish as needed by the operator
- CCS - Prevents pad skipping ...** CCS pockets reduce surface tension allowing operator to run pad flat on working surface
- CCS - Creates less heat ...** CCS pockets reduce surface contact resulting in less friction generated heat
- CCS - OEM approved ...** OEM tests confirm CCS pads out-perform convoluted pad designs
